About Me

A highly skilled and experienced Software Quality Assurance Engineer with 4+ years of experience, and a unique blend of front-end and back-end development skill. Expert in testing and debugging software applications, creating and executing test plans, designing and implementing automated testing frameworks, and collaborating with cross-functional teams. Demonstrated ability to ensure high-quality products and exceptional user experiences. Passionate about continuous learning and professional development.

Work Experience

Lead QA engineer :

Cashia
March 2021 to Present

- Leading the QA team to deliver a high quality tested product, for a financial services app that aims to centralize payments and make paying for goods and services effortless on time and within budget.
- Responsible for managing and delegating tasks to the Qa team, promoting a collaborative work environment.
- Developed and executed comprehensive automated test cases in advance to guide software developers in understanding how the feature would be tested.
- Maintained oversight of system operations, demonstrating excellent organizational and leadership skills.
- Worked closely with software developers on a daily basis, conducting rigorous testing of product features and documenting findings for further analysis and improvement.
- Collaborated with cross-functional teams to prioritize bugs in the Product Backlog, providing valuable insights for development sprint planning and enhancing the overall quality of deliverables.
- Collaborated closely with project managers and designers to ensure the project was meeting user needs and requirements.
- Wrote E2e and unit tests that enforced test driven principles
- Assisted in the maintenance and update of test documentation, including test scripts and test data.

- TECHNOLOGIES

Typescript, Selenium, Appium, ESLint,Jenkins,TestRail, Cypress, Redux, ReactJS, Figma, Slack, Jira, Git

QA engineer :

Innovex Solutions
February *2020 to March 2021*

- Contributed to the development of acceptance criteria for user stories and use cases for product features, ensuring alignment with business requirements and end-user expectations.
- Documented test results, defects, and enhancement requests, and created tickets in a project management tool to facilitate effective communication and collaboration.
- Managed the delicate balance between In-Sprint testing and Bi-weekly rollout testing, effectively meeting project milestones and ensuring timely product releases.
- Conducted manual testing and reported defects, providing detailed information for developers to address the issues.
- Assisted in the maintenance and update of test documentation, including test scripts and test data.
- Developed a basic understanding of test automation tools and techniques through hands-on experience and self-study.

- TECHNOLOGIES

LoadRunner, Selenium, SessionLab and Testpad, Jenkins, TestRail, Cypress, TypeScript, Python, Figma, Slack, Jira, Git

Junior backend developer/UX designer :

Safaricom
September *2019 to January 2020*

- Collaborated with cross-functional teams to ensure seamless integration and deployment of software products.
- Developed and maintained backend systems for web applications.
- Implemented automation processes to optimize product performance and scalability.
- Consumed REST APIs that formed from the backend that in turn provided deep understanding on the technology.
- Successfully designed and implemented the revenue collection system that has generated over 5 billion shillings in revenue, demonstrating strong technical and strategic skills.

- TECHNOLOGIES

Python, Django, Rest APIs, Docker, Nginx, HAProxy, Apache, Postman, Makermost, Git

Skills

- Proficient in various QA methodologies, including functional testing, regression testing, and exploratory testing.
- Strong knowledge of QA tools and processes, including test management systems, bug tracking systems, and version control systems.
- Sound understanding of software development methodology, such as Agile or Waterfall, and familiarity with software lifecycle processes.
- Ability to simplify complex ideas and features for effective communication and understanding within the team.
- Experience in writing clear, concise, and comprehensive test plans and test cases to ensure thorough test coverage.
- Proficient in testing 3rd-party integrations, particularly payment and marketing providers, to ensure seamless functionality.
- High proficiency in English, facilitating effective communication and collaboration with international teams.
- Familiarity with performance testing and security testing methodologies, tools, and best practices.
- Knowledge and practical experience with MySQL and database structure, enabling effective testing and troubleshooting.
- Experience in test automation, utilizing tools and frameworks to streamline testing processes and enhance efficiency.

Education

Bachelor of Science in Computer Science
Institution: Moringa School
Nairobi, Kenya
Year of Graduation: August 2019
